Workers' Ball 2026 — LUMINA Registration & Check-in System

Event: Harvesters International Christian Centre, Globe Centre — Workers' Ball 2026
Theme: LUMINA: Lights of the Globe

Overview

We need to build a simple registration and attendance system for the Workers' Ball 2026. The system will have two main parts:

1. **Registration Website:** A mini event webpage where workers can learn about the event and register their attendance.
2. **Check-in System:** A simple web tool that the attendance administrators will use on the event day to verify and record attendance.

All submitted registration and attendance information should automatically be saved to Google Sheets or Excel.

1. System One: Event Webpage & Registration

A. Mini Event Webpage: Create a simple, mobile-friendly webpage introducing the Workers' Ball. The page should contain:

- Event name: Workers' Ball 2026.
- Theme: LUMINA — Lights of the Globe.
- A short description of the theme and what it represents.
- A brief message about workers being the light of the world and reflecting God's glory.
- What attendees should expect from the event.
- A prominent **Register Now** button.

B. Registration Form: When a user clicks Register Now, they should complete the following fields:

Field	Input	Requirement
Email Address	Email	Required
WhatsApp Phone Number	Phone Number	Required
Department	Dropdown	Required
Will you be attending the Workers' Ball?	Yes/No	Required
What are your expectations for the event?	Long Text	Required
Would you like to make a presentation?	Yes/No	Required
If yes, what kind of presentation would you like to make?	Long Text if Yes	Optional

C. Department Selection: The Department field should be a dropdown with the following options:

1. Mission Team
2. Programs Team
3. Membership Team
4. Maturity Team
5. Ministry Team
6. Next Gen

The user should select their main team and corresponding department.

D. Registration Submission: Once the form is submitted:

- Save all submitted details automatically to a Google Sheet or Excel workbook.
- Generate a unique registration ID for the attendee.
- Send an automated email to the email address provided.

The email should confirm their registration and communicate their attendance status

E. Automated Email: For attendees who select Yes, the email should contain:

- Workers' Ball 2026 invitation and confirmation.
- Event theme and basic event information.
- Their registration details.
- A unique, scannable QR code.
- A unique 5-digit attendance code as a backup.

For attendees who select No, send a simple registration acknowledgement without an active check-in pass. The QR code and 5-digit code must be unique to each attendee.

2. System Two: Event-Day Check-in Tool

Create a separate, simple, mobile-friendly web page for the attendance administrators. This page will be used at the entrance to verify attendees.

A. Check-in Interface: The page should provide two ways to verify attendance:

- **Scan QR Code:** Use a device camera to scan the QR code sent to the attendee's email.
- **Enter Attendance Code:** Manually enter the attendee's unique 5-digit code.

B. Verification Process: When the QR code is scanned or the code is entered, the system should search the registration database and verify the attendee. The system should display:

Verification result	System response
Valid registration and not yet checked in	Display attendee's name and department, with a successful check-in confirmation.
Already checked in	Display an alert that the attendee has already been checked in, including the previous check-in time.
Invalid QR code or code	Display an error message: Registration not found.

Once a valid attendee is checked in, the system should automatically record the attendance.

4. Data Management — Google Sheets / Excel

All information should be automatically synchronised with **ONE** Google Sheets document or Excel workbook. The sheet should have **TWO TABS**:

Tab 1: Registration Records: This tab stores everyone who submits the registration form, whether they are attending or not.

Tab 2: Attendance Records: This tab records only verified attendees who have checked in. The system must prevent duplicate check-ins while retaining the original check-in record.

5. User Journey — How the Entire System Works

REGISTRATION PROCESS

1. Worker visits the LUMINA event webpage.
2. Worker reads about the event and clicks Register Now.
3. Worker completes the registration form.
4. Worker indicates whether they will attend.
5. Worker submits the form.
6. Registration details are saved automatically to Google Sheets.
7. System generates a unique registration ID and attendance credentials where applicable.
8. Worker receives an automated email with their registration confirmation and, if attending, their QR code and 5-digit code.

EVENT-DAY CHECK-IN PROCESS

1. Attendance administrator opens the check-in webpage.
2. Worker presents their invitation email.
3. Administrator scans the QR code or enters the 5-digit code.
4. System verifies the registration.
5. System displays a successful or unsuccessful check-in message.
6. Successful check-in is automatically recorded in the Attendance Records tab.
7. Administrator proceeds to the next attendee.
